BIRD'S VITA-BANDS

WHETHER you start your crop in Vita-Band "H", Vita-Band "D", which disintegrates in the soil, or Vita-Band "10", for the shorter growing periods, you can move whole flats at a time. Individual plants are easily removed from the flats for quick transplanting without shock.

HIGHER net profits result because crop handling is more economical, plants are healthier and mature earlier.

PLEASE NOTE: When ordering Vita-Bands check chart how sizes are packed. We do not break cartons. Prices are per 1000.

VITA-BAND 10 for short growing periods.

Will usually contain root growth up to approximately 8 to 10 weeks. Nutrient-treated with quickly available plant food... your judgment determines need for additional feeding. Vita-Band 10 is identical to Vita-Band "D" except Vita-Band 10 is removed at time of transplant. Vita-Band "D" is not.

VITA-BAND D contains root growth until grower chooses to let root through Band.

Only quick, slight pressure is needed to crack Band. Do not remove Vita-Band "D" when transplanting. Band disintegrates in the soil permitting free growth of roots from time of transplant. Nutrient-treated with quickly available plant food.

VITA-BAND H is the new nutrient-treated successor that replaces Bird Vita-Band 40. Vita-Band "H" will control root growth of those plants which demand extra long growing periods.
